

System 2000 Automatic Awning

System 2000 Automatic Awnings are especially ideal for cladding and fibro style applications, where fixing is not required at the very ends of the awning, as it is with the standard Automatic Roll Up Awning. Provided the awning is installed with a hood, fixing points for the System 2000 Automatic Awning can be located anywhere along the full width of the awning hood at the top, as also can the fixing of the guide rails and stand out arms be positioned anywhere along the bottom rail. Sunlight Products sources an extensive range of Fabrics from all of the major Fabric Suppliers to the awning industry. System 2000 Awning Hoods are available in a decorator range of colours complementing the appearance of the awning as well as protecting the fabric when not in use.

Available Sizes
